

Carbon neutral in 2020

By the end of the year
we will be carbon neutral.
This is how.

Much more renewable energy: We're switching our office electricity supply wherever possible.

Fly less, fly smart: We're reducing the need for travel by maximising the power of digital communication. Where flying is essential, we'll use airlines that are reducing their emissions or have become carbon neutral themselves.

Be agile: We are enabling more of our colleagues to work in an agile, flexible way more of the time, which drives carbon reductions in office space and travel.

Low carbon road travel: Whenever practicable, cars we hire will be electric or hybrid.

Better data: We're continually improving the quality of our carbon data and the way we present it – showing carbon performance and trends from the scale of the global Mott MacDonald Group to offices, teams and individuals.

Offsetting: We know that at the end of the year we'll still have a carbon footprint. We will mitigate it by investing in solutions that remove and sequester carbon from the atmosphere, for example afforestation or peatland restoration. We'll work with offsetting specialists, carbon funds, and in the longer term develop projects with our clients and partners.

We plan to achieve certification to PAS 2060, the international standard for carbon neutrality.

For our communities it's about contributing to a sustainable future for the planet we share.

For our clients it's about playing our part in the transition to a low carbon economy

For our colleagues it's about being responsible, ensuring our business is fit for the future.

Combating the causes and effects of climate change
